## Household Spending in Whitehorse 2015

### Highlights:

- Whitehorse households spent an average of \$68,788 on goods and services in 2015, up 9.4% compared to the previous Survey of Household Spending (SHS) in 2012 (\$62,903).
- Of the total household expenditure (\$95,529) of Whitehorse households, current consumption expenditures (\$68,788) accounted for 72.0%, income taxes (\$17,370) accounted for 18.2%, personal insurance payments and pension contributions (\$7,137) accounted for 7.5%, and gifts of money, support payments and charitable contributions (\$2,234) accounted for 2.3%.

### Note to Readers

This report presents the results of the 2015 Survey of Household Spending (SHS), conducted by Statistics Canada during January to December 2015 in Whitehorse, Yukon. The data collected includes detailed household expenditures, as well as information on dwelling characteristics, household demographics, and household equipment.

The 2015 SHS combines the use of a questionnaire and an expenditure diary. The questionnaire is used for the most part to collect regular and less frequent expenditures. The diary is used to collect frequent or less important expenditures. In the territorial capitals, all households sampled for the interview are also selected to complete an expenditure diary.

The 2015 SHS is limited to the three territorial capitals (Whitehorse, Yellowknife and Iqaluit) and uses the same survey design, which was implemented in 2010, for the provinces. As such, data for the territories from SHS 2015 should be used with caution when comparing to those from earlier surveys. Canadian figures no longer include any territorial data.

The SHS is conducted annually in the provinces. Starting in 2015, the Survey of Household Spending is conducted every two years in the territories in order to reduce the response burden on the territories' small population base.

Source: Statistics Canada Custom Run.

**Average Expenditure per Household:** The average expenditure per household is equal to the estimated total expenditure of all households divided by the estimated number of households. The average is based on all households in a column, including households that reported a zero value.

**Aggregate Expenditure:** The aggregate expenditure is the sum of expenditures reported from all households in the survey.

**Percentage Reporting:** The percentage reporting is the percentage of households that reported purchasing an item. These percentages cannot be added together to form sub-totals.

**Average Expenditure per Household Reporting:** Average expenditure per household reporting is calculated for those households that reported the specific expenditure, i.e. without zero values. Average expenditure per household reporting was calculated using unrounded data. To calculate the average expenditure per household reporting the purchase of item, divide the average household expenditure on that item by the corresponding percentage reporting, and then multiply by 100. For example, to find the average expenditure on airplane transportation by households that actually had airplane transportation expenses:

$$\frac{\text{Average household expenditure on airplane transportation expenses}}{\text{Percentage reporting}} \times 100 \quad \text{Example: } \frac{\$1,751}{68.6} \times 100 = \$2,553$$

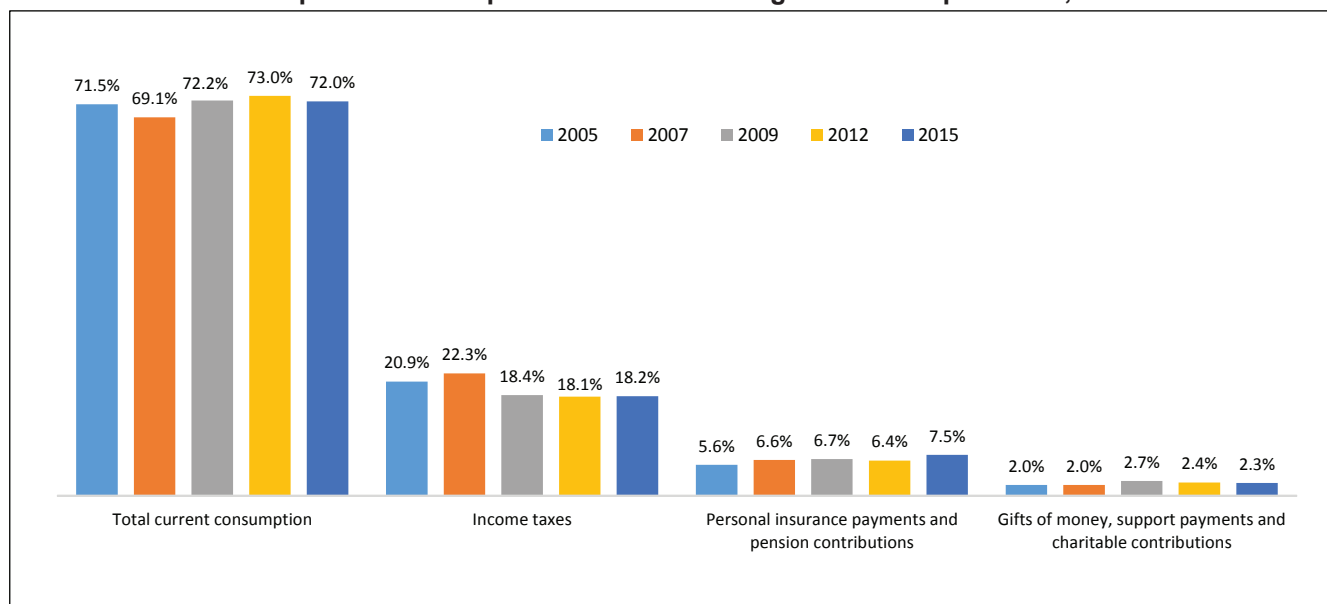

## Household Expenditure Components, Whitehorse, 2015
