

YUKON BUREAU OF STATISTICS

Business Survey 2007 Spring, 2007

Highlights

Industry with the Greatest Number of Employees Retail Trade
 Industry with the Highest Percentage of Businesses with Gross Revenue Over \$500,000 Finance & Insurance
 Occupation with Greatest Number of Vacancies Intermediate Sales & Service

In the spring of 2007 the Yukon Bureau of Statistics conducted a business survey of approximately 2,600 businesses which compiled information about types, employees, revenue levels, hiring etc. of Yukon businesses. Due to the substantial difference between home-based businesses and non-home-based businesses, a large section of this report separates the two types of businesses.

Because not all businesses answered each question, total numbers given in each category may not be consistent through all sections.

All commentary is based on non-suppressed numbers.

Total	2,168	2,204	2,675	2,625

*The increase in the Agriculture, Forestry, Fishing, Hunting Industry between 2003 and 2006 is due in part to the addition of a new source of businesses to the survey.

Total Number of Businesses by Industry, 2007

Businesses and Employment, by Non-Home-Based/Home-Based

The Construction Industry reported the greatest number of employees of the home-based businesses at 440, or 19.4%. The Retail Trade Industry had the largest number of employees of the non-home-based businesses at 2,088 or 20.4%.

Non-Home-Based and Home-Based Businesses, 2007**

Businesses and Employees by Community

As would be expected, Whitehorse held the largest percent of businesses and employees, at 76% and 80% respectively. The majority of the remaining businesses were located in the Yukon; however, 70 businesses (with a total of 196 employees) reported business headquarters outside of the Yukon.

Labour Market Demand—Non-Home-Based Businesses

Labour Demand Section

With the winter of 06/07 bringing record low unemployment rates, the third section of the business survey dealt with the timely issue of labour demand. In the 2006 Business Survey only a portion of businesses were surveyed regarding labour demand issues, whereas in 2007 all businesses in the survey were asked questions on staffing issues. Since the labour demand issues vary widely between home-based and non-home-based businesses, the two types of businesses are dealt with separately in this report, starting here with the non-home based businesses, and followed by the home-based business section on page 7.

How many new employees has this business hired?

Number of New Employees

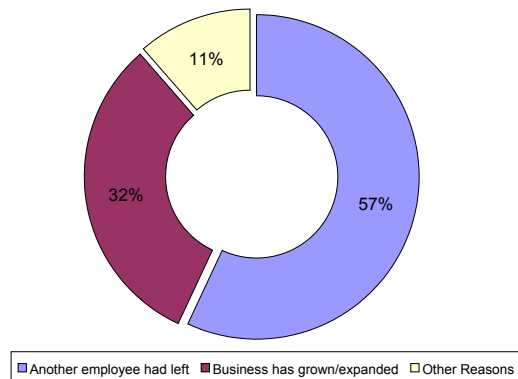

Almost two-thirds of the non-home-based businesses surveyed said that they had hired new employees in the previous six months. Most of these businesses had hired one or two new employees, but about a third of the businesses surveyed had hired four or more.

Reason for New Employees

The largest group of these new employees (at just under sixty percent) were hired because another employee had left, and the next largest section, thirty-two percent, were hired because the business had grown or expanded.

When businesses were asked to describe their perception of why the former employee had left the business, approximately one-third of the reasons given were that the employee had found another job, and a fifth of the reasons given were that the employee had left the territory or community.

Reason Employee was Hired

The new employees were...

■ Yukon Residents ■ Hired from outside Yukon

Origin of New Employees

Of those non-home-based businesses who had hired in the six months prior to being surveyed, the majority hired employees from the Yukon, while just under one-fifth hired employees from outside of the Yukon.

Even though most of the new hires were Yukon residents, two-thirds of businesses reported having difficulty recruiting people from the Yukon.

Note: A small number of businesses gave more than one reason for hiring employees or for the origin of their new employees. Therefore, percentages are of total responses, not businesses.

Non-Home-Based Businesses

How many vacancies do you have to be filled?

Current Vacancies

Almost a third of the non-home-based businesses surveyed said that they had vacancies at the time of surveying which needed to be filled. Most of these businesses had vacancies for one or two employees, but about a third of the businesses surveyed had vacancies for three or more.

Reason for Current Vacancies

Half of these positions were vacant because a former employee had left, and the next largest group, forty percent, were vacant because the business had grown or expanded. When businesses were asked to describe their perception on why the former employee had left the business, almost one-third of the reasons given were that the employee had found another job, while just under one-fifth of the reasons given were that the employee had left the territory or community.

Why were these vacancies created?

Current Vacancies in Non-Home-Based Businesses

Total	742

Home-Based Businesses

As labour demand issues vary widely between home-based and non-home-based businesses, the two types of businesses are dealt with separately in this report. The non-home-based business section starts on page 5, while the home-based-business section follows below.

How many new employees has this business hired?

Number of New Employees

Almost half of the home-based businesses surveyed said that they had hired new employees in the previous six months. Most of these businesses had hired one or two new employees, but about a fourth of the businesses surveyed had hired four or more.

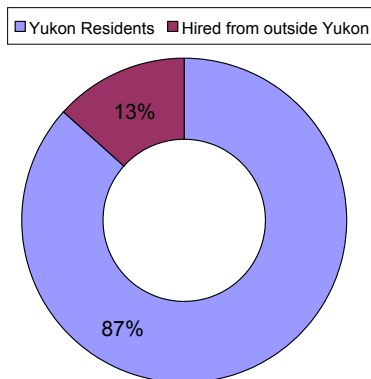

Reason for New Employees

The two main reasons that home-based businesses had hired new employees were that their business had grown/expanded (41%) and that another employee had left the business (38%). When businesses were asked to describe their perception on why the former employee had left the business, approximately one-fifth of the reasons given were that the employee had moved out of the territory or community, while almost another fifth of the reasons given were that the employee was seasonal or wanted to pursue education or travel.

Reason Employee was Hired

The new employees were...

Origin of New Employees

Of those non-home-based businesses who had hired in the six months prior to being surveyed, the majority hired employees from the Yukon, while only 13% hired employees from outside of the Yukon.

Even though most of the new hires were Yukon residents, half of the responding businesses reported having difficulty recruiting people from the Yukon.

Note: A small number of businesses gave more than one reason for hiring employees or for the origin of their new employees. Therefore, percentages are of total responses, not businesses.

Home-Based Businesses

How many vacancies do you have to be filled?

Current Vacancies

Twenty percent of the home-based businesses surveyed said that they had vacancies at the time of surveying which needed to be filled. Most of these businesses had vacancies for one or two employees, but 13% of the businesses surveyed had vacancies for three or more.

Reason for Current Vacancies

Over sixty percent of these positions were vacant because the business had grown or expanded, and 15% were vacant because a former employee had left. When businesses were asked to describe their perception on why the former employee had left the business, answers included the employee pursuing education, getting another job, quitting, moving away, and the job being temporary or seasonal.

Why were these vacancies created?

Current Vacancies in Home-Based Businesses

Occupation of Currently Vacant Position	# Vacant
Senior, Middle & Other Management	4
Profession in Natural & Applied Sciences	5

Total	52

Staff Recruiting and Retention (both Home-Based and non-Home Based)

Of the non-home-based businesses asked, approximately two-thirds reported having difficulties recruiting employees from the Yukon, and the same was true for half of the home-based businesses who responded.

All businesses who reported having difficulties recruiting employees from the Yukon were asked a series of questions on employee recruitment and retention.

Skilled/Experienced Staff

Ninety-four percent of all businesses surveyed had difficulties recruiting skilled or experienced staff from the Yukon. Those businesses were then asked why they thought that was the case, and twenty-five percent of their answers had to do with the large number of jobs currently available—many skilled workers have their pick of jobs, and many are currently employed. Another quarter of answers dealt with the inadequate quality of labour available, i.e. skilled workers are difficult to find due to the small population base in the Yukon, the lack of training available, and workers retiring.

Seventy-one percent of businesses had tried to find solutions to their hiring problems by stepping up recruiting practices, including advertising both in and out of the Yukon (35%), hiring unskilled workers and providing training (20%), and offering incentives/benefits (14%). Approximately seventy percent of the businesses reported that the solutions they had tried had worked or somewhat worked.

Inexperienced/Unskilled Entry-Level Staff

Just over half of the businesses reported having difficulties recruiting inexperienced or unskilled entry-level staff. Reasons they gave for this were similar to those given for skilled or experienced staff. Again, twenty-five percent of responses had to do with the large number of jobs available and the low unemployment rate. Another thirty-five percent of reasons involved the inadequate quality of labour; i.e. people don't want to work or can't work, have a poor work ethic, or are untrainable.

Sixty percent of businesses had tried to find solutions to their hiring problems by stepping up recruiting practices, including advertising both in and out of the Yukon (31%), hiring unskilled workers and providing training (19%), and offering incentives/benefits (21%). Almost seventy percent of the businesses reported that the solutions they had tried had worked or somewhat worked.

Sixty-five percent of the responding businesses reported specifically targeting First Nations in their search for an employee.

How Businesses Retain/Attract Staff

Recognizing the difficulties in hiring new/qualified staff, businesses often try different tactics to retain their existing staff as well as attracting new staff. Over three-quarters of businesses surveyed had increased wages in the previous six months and 68% of businesses had offered incentives or benefits in an attempt to retain and/or attract staff. Of all benefits/incentives offered, medical and dental benefits comprised 28%, and another 28% was made up of financial incentives, including pension plans, employee discounts and profit sharing, cash bonuses, commissions, and regular salary increases.

Employee Training (both Home-Based and non-Home Based)

The fourth section of the Business Survey dealt with employee training. Businesses were asked a series of questions on length of training offered, employee support, the necessity for upgrading skills, and Yukon-specific training needs. The answers from home-based and non-home-based businesses are combined below.

Length of Employee Training

When asked how long initial training for new employees typically lasts, 30% said that it depends on the employee's previous experience, attitude, and/or aptitude. Another 30% said up to one month.

Support offered to New Employees

Sixty percent of businesses' answers offered support in the form of mentoring their newly-hired employees, 25% offered continuing training and educational support, and the remaining answers varied from creating a positive work environment to having regular meetings with the new employee.

Types of Training/Skills Upgrades Needed for Employees

Skills Upgrading

Over seventy percent of businesses said that their employees at times needed ongoing training or skills upgrading in order to do their jobs. When asked what type of training, just over a third of responses dealt with trades and skills upgrading, 26% involved technology, and 15% had to do with health and safety skills upgrading.

Training Needs in the Yukon

Finally, two-thirds of businesses responded that there were areas of training that needed improvement in the Yukon—the top area mentioned was specialized skills training, which includes training in areas such as tourism, safety, and graphic design.

Areas of Training that Need Improvement in the Yukon

Gross Revenues of Yukon Businesses

Almost two-thirds of Yukon businesses reported gross revenues in 2006 of less than \$100,000. Eighty-six percent of the Agriculture, Forestry, Fishing, Hunting Industry reported having less than \$30,000 gross revenue. The Finance & Insurance Industry had the greatest percentage of businesses with gross revenues greater than \$500,000.

<i>Which of the following broad ranges best describes the 2006 gross revenues?</i>	Less than \$30,000	\$30,000 - 99,999	\$100,000 - 499,999	\$500,000 or more	Total

Number of Yukon Businesses by Gross Revenue, 2007

Overview of Hiring for All Yukon Businesses by Occupation

Number of Vacant Positions and Businesses Reporting by Occupation

As the above chart shows, businesses hiring in the Sales and Service occupations were most likely to be hiring for more than one position. At the time the business survey was conducted, there were almost 350 vacant positions in Sales and Service occupations—171 in intermediate, 135 in skilled, and 43 in elemental sales and service. The next largest group was the Trades/Skilled Transport/Equipment Operators with 35 businesses reporting 95 openings. The third group was closely related to the second; Intermediate in Transport, Equipment Operation, Installation & Maintenance occupations had 71 openings reported by 48 businesses.

Notes: This report functions as a summary of the results of the 2007 Business Survey. For specific data from the survey, please contact the Yukon Bureau of Statistics.

Industries are defined in this report according to the North American Industrial Classification System (NAICS) of 1997. For a list of which industries are included in each NAICS category, see <http://www.statcan.ca/english/Subjects/Standard/naics/1997/naics97-menu.htm>.

Occupations are defined according to the National Occupation Classification System (NOCS) of 2001. For a list of which occupations are included in each NOCS category, see <http://www23.hrdc-drhc.gc.ca/2001/e/groups/index.shtml>.
